Skills

- Java, Spring Boot, SQL, PostgreSQL, postman, AWS, JIRA, Git, GitHub, Javascript, CSS, HTML, C++ , Bash/Shell Scripting, React, Node.js, MVC, JUnit, SQL Server, MySQL, Selenium, Docker, Kubernetes, REST API, Visual Studio, Elastic Search, CI/CD, Bitbucket

Experience

Software Engineer, 909 Technologies Pvt. Ltd May 2025 - Present

- Developed 15+ UI screens using Jmix, Vaadin, and Spring Boot, delivering dynamic data rendering and complex UI logic for program-to-COCI alignment workflows.
- Designed business logic for data population, filtering, and display; integrated PostgreSQL and Liquibase, implemented 100k+ course mappings and 50+ migrations to ensure data integrity and schema maintainability.
- Led onboarding and mentored 1 engineer, conducted 5 technical interviews, enforced Git-based code reviews and CI, and resolved 200+ issues to accelerate delivery and improve system stability by 30%.

Software Engineer, Future Algorithm Pvt Ltd. Jul 2023 - Jun 2023

- Maintained and enhanced WVOIC, an Intellitrack application built on Spring, resolved 120+ production bugs and delivered 18 feature releases, improving system uptime from 95% to 99.5%.
- Implemented model-driven development to update data models, controllers, and views; reduced bug regression by 40% and ensured code stability via code reviews, CI, and version control across a 10-member engineering team.

Quality Assurance Engineer(Internship), Unicommerce Pvt Ltd. Dec 2022 - Jun 2023

- Worked on SOAP, Postman for static testing, and Selenium for dynamic testing. Developed regression test suites using JUnit and analyzed API response timing with Python scripts.

Projects

[Hotel Management System](#)

- Built a full-stack hotel management system using **React**, **Spring Boot**, and **MySQL** with RESTful APIs for rooms, bookings, users, admin workflows, and complete CRUD operations.
- Implemented secure authentication and authorization with **Spring Security** and **JWT**, and integrated **AWS S3** with **IAM** for scalable, secure image storage.

[Design Patterns Projects \(Parking Lot, BookMyShow Clone\)](#)

- Implemented backend systems for Parking Lot and BookMyShow clones in **Java**, applying Builder, Prototype, Singleton, Strategy, and Factory patterns to produce scalable, well-structured architectures and class diagrams.
- Designed and built ticketing, booking, and payment logic that simulates real-world workflows, demonstrating strong **OOP** and system-design skills.

Achievements

- Solved **800+ coding problems** across LeetCode, CodeChef, Codeforces, GeeksforGeeks, and HackerRank, demonstrating strong algorithmic problem solving and consistent practice.
- Won **All India Hackathon 2023** for a user-friendly IPR website concept, from ideation to prototype and team leadership.
- Participated in **Hackanomics** and submitted projects on Devpost, gaining experience in rapid prototyping, pitching, and collaborative development.

NIT Uttarakhand, 2023

B.Tech in Electrical and Electronics - CGPA 8.2
